General Information

Avira combines with this release two updates. The release of Update 11 includes fixes already implemented for Update 10. The merge of the two updates has been made in order to facilitate the update for the customers.

The Avira Version 2013 Update 11 for all Windows Workstation is addressing several categories of issues.

The highlight of this update is the preparation for the Arabic version of all workstation products:

- Avira Free Antivirus
- Avira Antivirus Premium
- Avira Internet Security
- Avira Professional Security

The second highlight is the preparation of Avira Free Antivirus for Windows 8 certification.

Other important fixes are related to the drivers of various Avira modules.
Due to these changes a system restart is required for all products on all operating systems.

> **Note**
> This update requires a reboot for all products on all operating systems:
>
> - **Avira Desktop products** on all supported operating systems

Bug fixes and improvements

Avira Version 2013

- Added suffix for Avira Protection Cloud detections in the scanner action dialog

- The checkbox for the manual confirmation of the uploads in the Avira Protection Cloud dialog is now keeping the configured value

- Improved prevention of Avira Engine and Avira Protection Cloud false positives

- Several fixes and improvements in the Avira drivers for Windows 8

- On Windows 8 there will be no Avira Search Free toolbar offered during installation. It can be installed later, after the installation (Avira Free Antivirus only)

- Many improvements related to the preparations of the Arabic language release (right to left support)

- Fixed slideup message for the automatic renewal service of the subscribtion
