

# Avira AntiVir Exchange 9.2.x

Update to AntiVir Exchange 9.2.x  
with a connection to the  
Internet Update Manager

**HowTo**

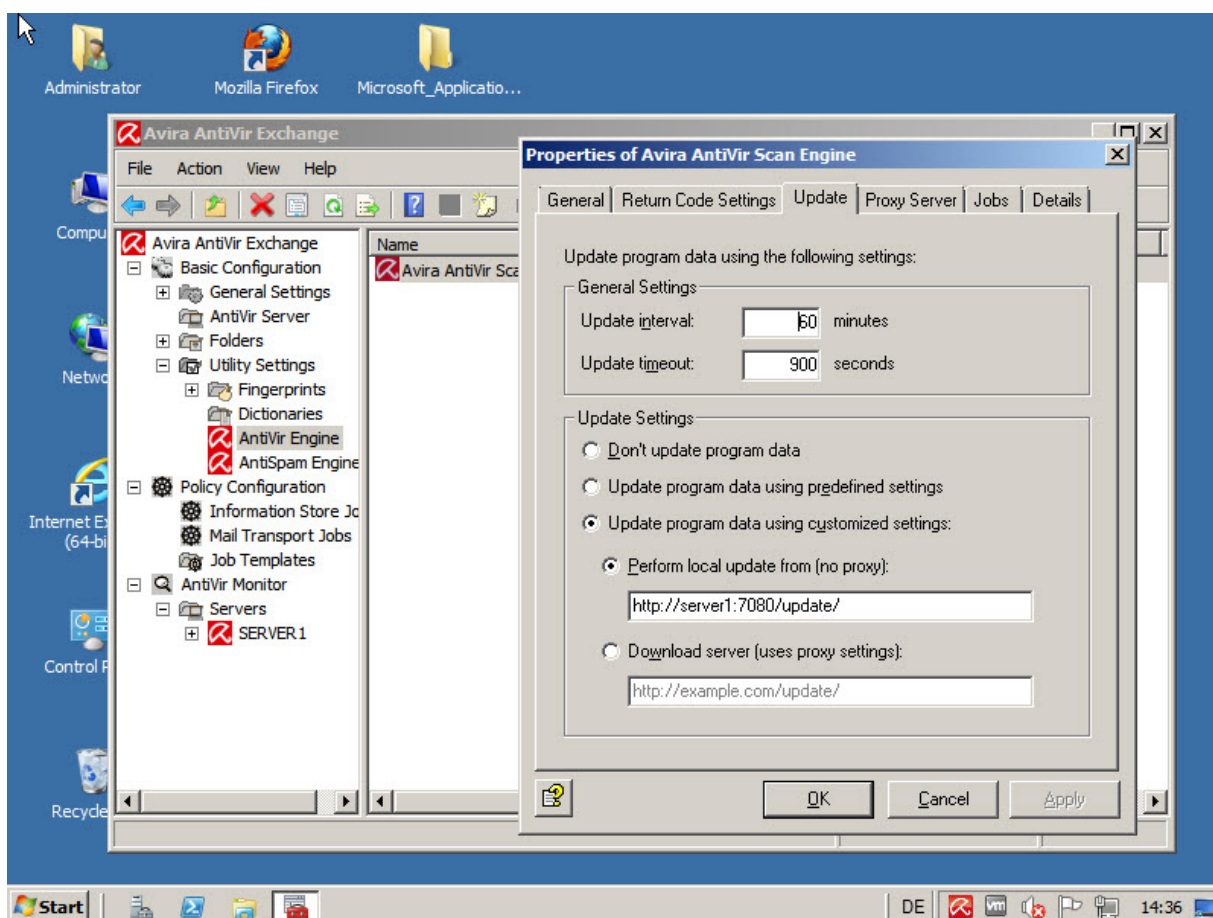

## Update to 9.2.x AntiVir Exchange with a connection to the Internet Update Manager

Please note that a new version of AntiVir Savapi is published with the AntiVir Exchange 9.2.x release for the scan component „AntiVir engine.“

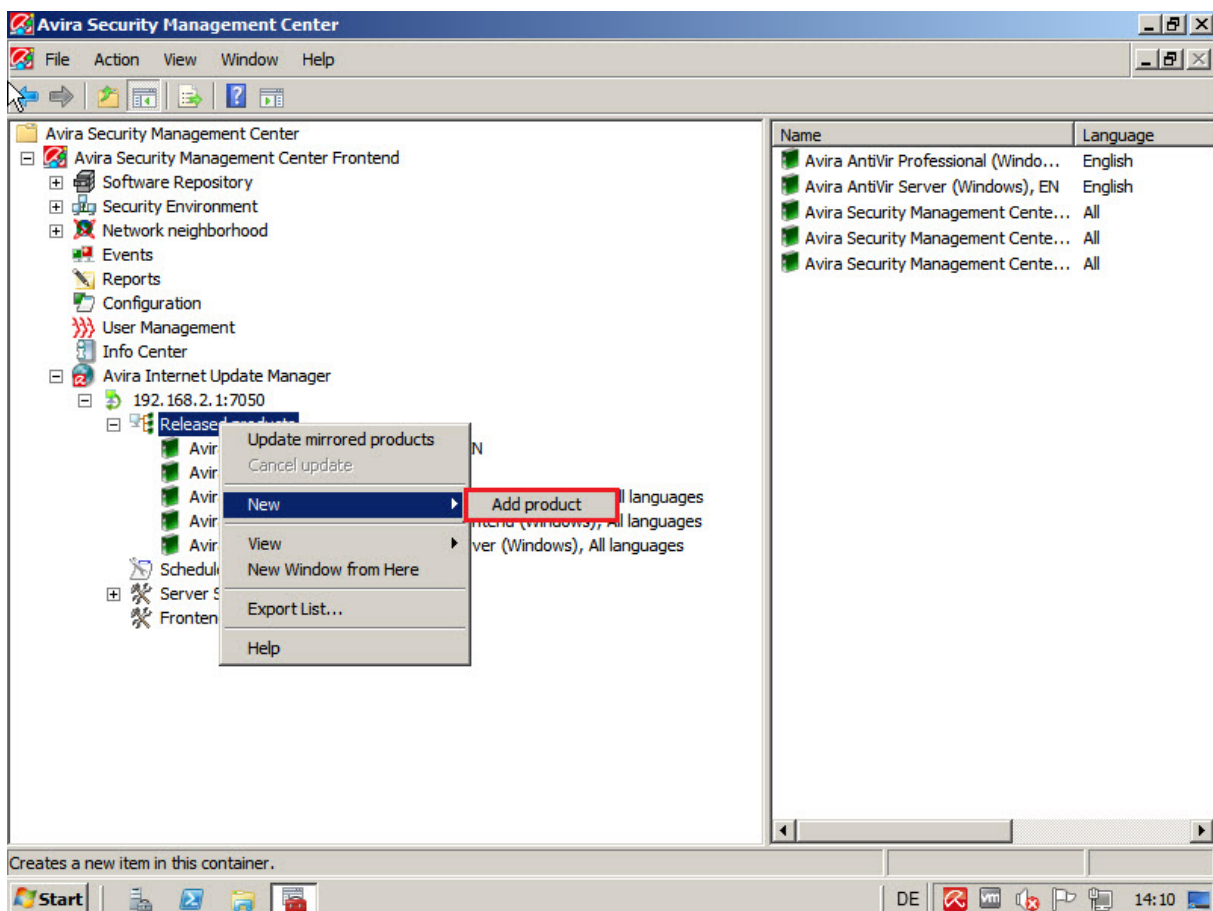

If an internal Internet Update Manager is used to upgrade the engine and VDF for the AntiVir Exchange product, the software repository of the Internet Update Manager has to be checked. That's because a new update structure is published with the new Savapi version.

Please proceed as follows:

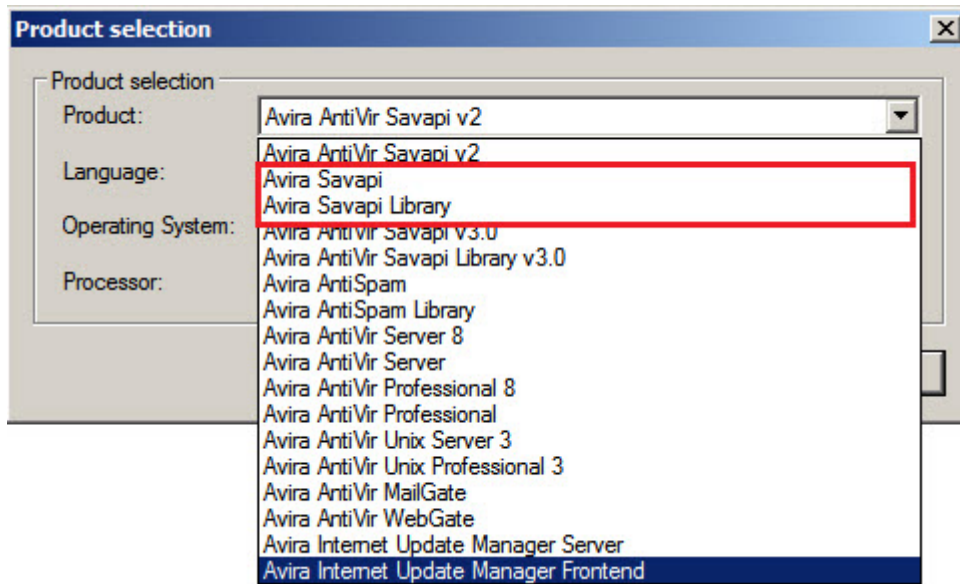

1. Please select first the category „Utility Settings“ and then „AntiVir Engine“ within AntiVir Exchange
2. Then click the right mouse button on „Avira AntiVir scan engine“ and select the tab „Update“

3. Then, please log on after your SMC installation or open the Internet Update Manager Frontend, if you do not use SMC.
4. Click on „Configuration“ and select the item „Update“
5. Deactivate the option „Automatically synchronize software repositories between SMC and IUM servers“ and then click on *OK*
6. You will now be logged out of the SMC. Please log in again at the SMC
7. Below the header „Avira Security Management Center Frontend“ you will find the the subitem „Avira Internet Update Manager.“  
With a right mouse-click on „Released products“ you can add a new product that should be offered centrally by selecting „New“.

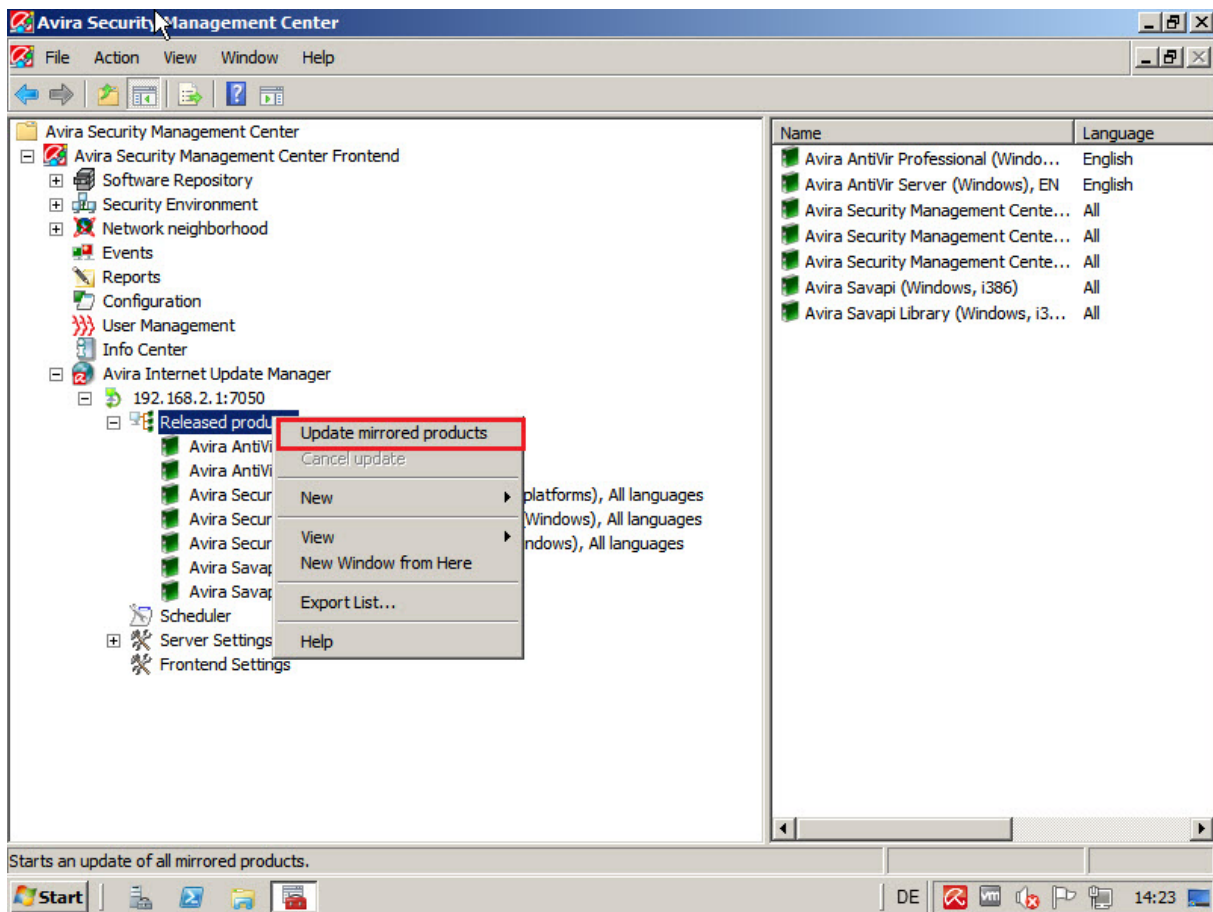

8. The packages „Avira Savapi“ and „Avira Savapi Library“ must be added in the Internet Update Manager so that the update of engine and VDF works with the AntiVir Exchange version 9.2.x, too.

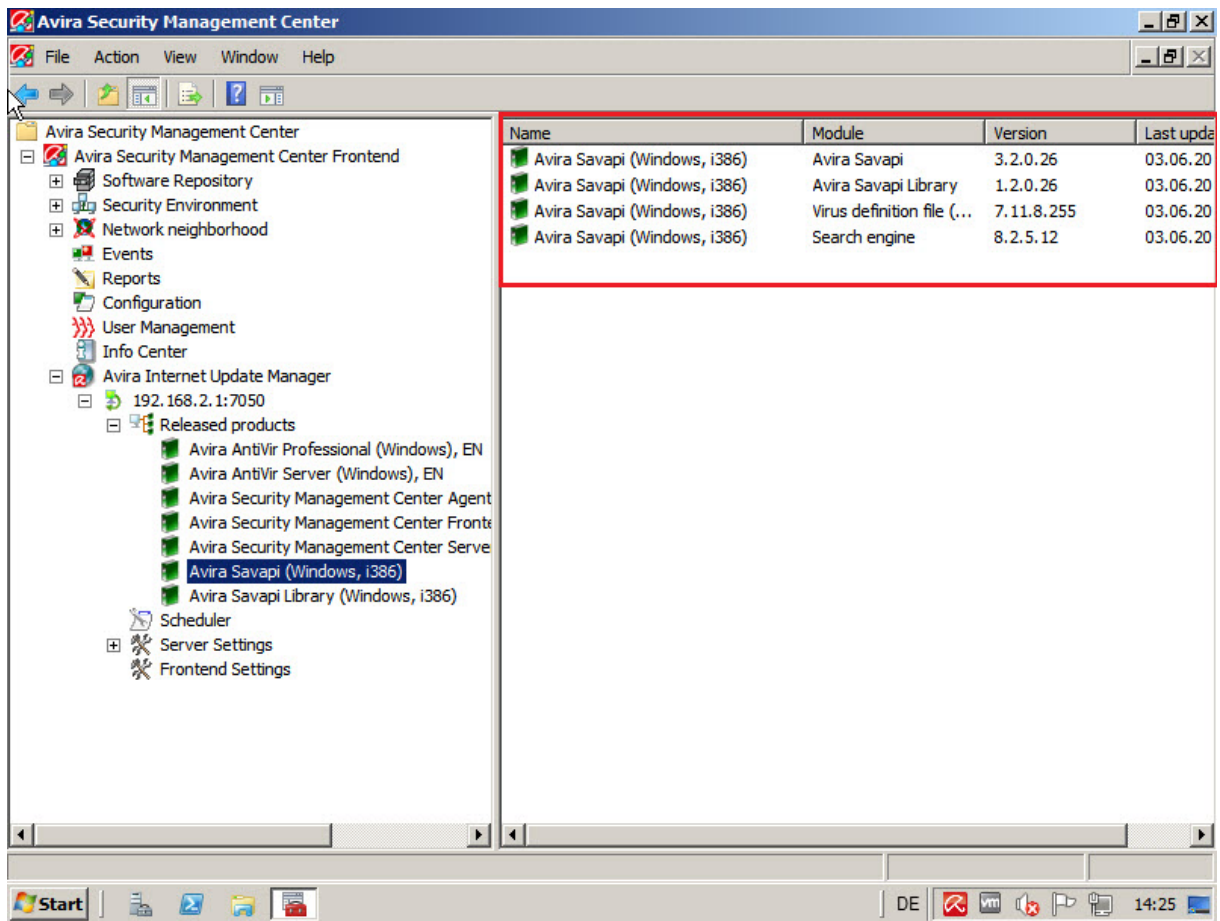

Please select the corresponding package and then press the button “Add”.

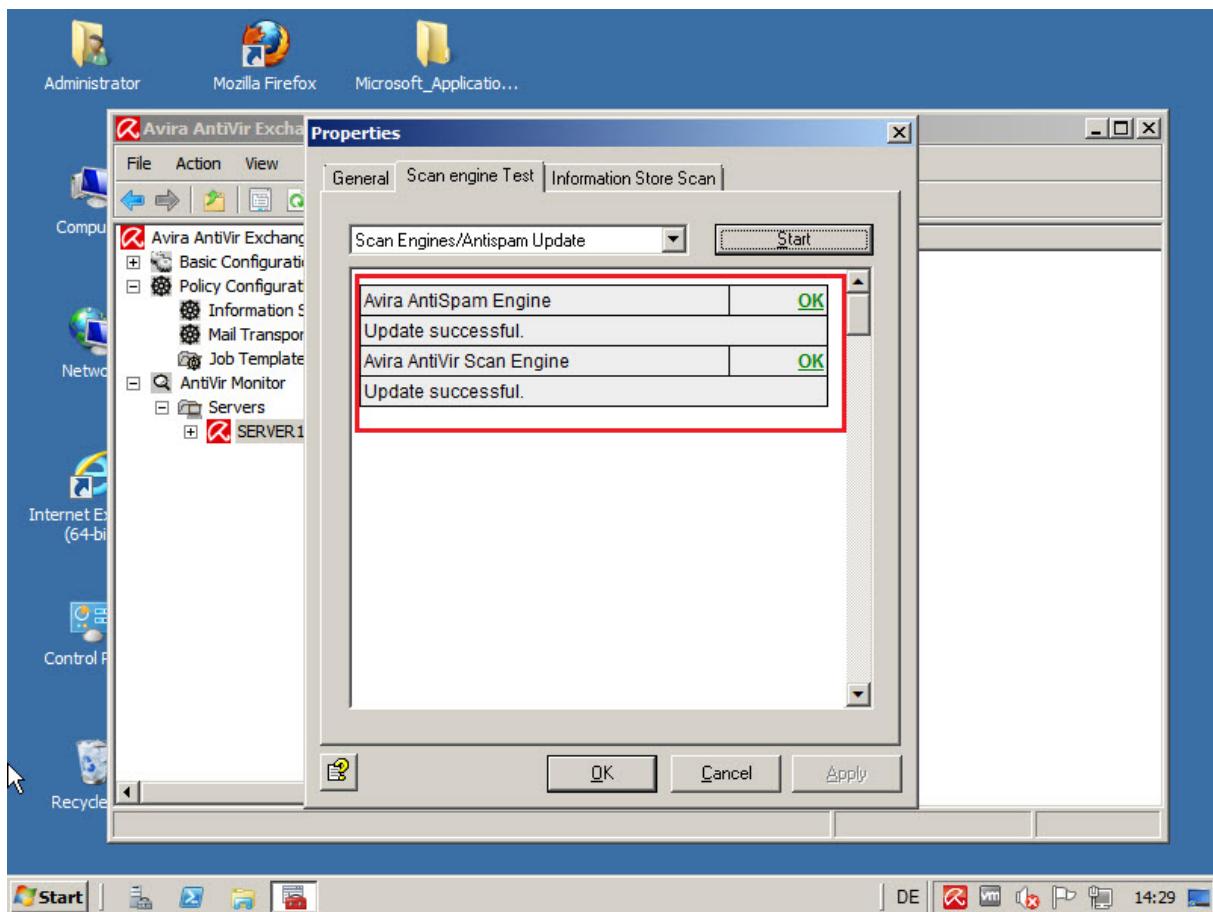

9. Once completed, please update your remaining update structure of the Internet Update Manager.

By clicking on each package you can check whether the update was successful.

Now the source has been adjusted and the update works as well in the AntiVir Exchange version 9.2.x.
