

General Information

The Avira Version 2013 Update 20 for all Windows Workstation and Server products is adding a new feature in the consumer paid workstation products and is addressing several categories of issues.

Affected products

- Avira Free Antivirus
- Avira Antivirus Premium
- Avira Internet Security
- Avira Professional Security
- Avira Server Security

Affected languages

- All supported

Note

The Avira Version 2013 Update 20 does not require any reboot.

Bug fixes and improvements

Common fixes

- Windows 8.0 and 8.1. compatibility fixes (crashes reported by Microsoft WER)
- Various improvements in *Local Decider* and in the old *Avira Protection Cloud* integration
- Bug fixes for stability and interoperability for the *Windows Filtering Platform* driver in *Mail Protection* and *Web Protection*

Fixes in special areas

- **Realtime Protection**
 - Integration of the APC in the *Real-Time Protection* (in the paid consumer products)

- **Web Protection**
 - Speed improvements:
 - Disabled archive scanning for files bigger than 10 MB
 - Do not intercept files bigger than 100 MB
 - Usage of the new database for scanned files (GAVIDB)

 - Fixed an issue with Malware Bytes updater on Windows 8. Avira's WFP driver prevented the software to download its update

- **Avira Firewall**
 - The checkbox "Always trust this vendor" has been set on default active, so that the user has to allow a signed application only once no matter what the application does

- **Webloader**
 - AIMS messages have been added in order to improve the tracking of the installation.
