

Avira

Avira Free Mac Security
(Version 2, Update 2)

Changelogs

1. General Information

Avira Free Mac Security, version 2 update 2 (version number 2.0.2) will be released on January 28th, 2014.

2. Improvements

- Enable the deactivated Real-Time Protection
- Disable temporarily the Real-Time Protection
- Added support for the built-in MacOSX 10.8 and 10.9 Notifications

3. Bug fixes

- The “Continue scan on battery“ dialogue displays only the half dialog
- “Your Mac is protected“ after a crashed Scan and Reboot
- The dialogue “Running low on battery“ does not display the Avira logo
- The Mac has to reboot up to 2 times during an update to our current product version
- The size of the Mac IPM Notifier is too small on MacOS X 10.9
- A malware alert is displayed with a green icon instead of a red icon
- Various localization/translation issues
- GUI crashing, unknown exception in log backend
- Error message from avguard: „Error: unable to execute shell command.“
- Authorization: no admin password dialogue when custom handling
- Configuration: general settings „deactivated planned updates“
- Eventcenter: Guard Messages do not appear if the updater filter option is not selected
- Quickscan: The scan of “plist“ file references does not work
- Scan: Problems when doing a custom scan on special windows viruses
- The Updater requires a password when no product update is available
- The on-access-scan cannot perform correctly a user interaction
- The GUI cannot start because of a self check failure
- The One Click Repair treat gets stucked if it is not possible to start a scan
- The GUI notifies on startup that the Real-Time Protection is inactive though it is active
- UXIPM acquires a screen size and does not use it
- The GUI status page shows that the Real-Time Protection is OK although it does not run
- The IPM displays a blank window if the *layout.htm* is empty
- Restore files from quarantine does not work properly in some conditions
- The Scan page displays information about the scanned files and folders whereas it should display only information about the files
- Error message about updates in a certain scenario
- The updater displays no logs after a log writer update
