Avira Version 2012 Service Pack 1
Release Information

1. Optimized Security

Service Pack 1 provides a number of improvements in the area of security:

- The automatic removal of certain infected data after system reboot has been improved
- The scanning procedure covers folders and files to a larger extend
- The quality of repair operations and scheduled scans has been improved

2. Improved Usability and Customer Communication

Furthermore, there are several usability and communication improvements:

- Customers are directed to a "Welcome" page after installation and to a "Sorry to see you leave" page after uninstallation
- The internal communication between product and backend has been optimized to efficiently support our customers
- The new toolbar for Avira Free Antivirus users will be offered again. Since users now see a sample image of the toolbar, they have a clear picture of the offer and can facilitate a decision for it. The toolbar contains a browser security feature; the user can adapt his browser security settings with ease
  - Delete cookies
  - Clear history
  - Private browsing

  The toolbar contains the Avira Search as well

3. Bug Fixing

A number of bugs has been fixed to increase the product quality.
