

Focus of this release

This new version of the Avira Small Business Security Suite and the Avira Endpoint Security strengthen the Avira product portfolio for Micro, Small and Medium Businesses.

The focus of this release is primarily on the renaming of the products in context with the rebranding of Avira products and on updating its integrated components.

1. Avira Small Business Security Suite

1.1 Renaming to Avira Small Business Security Suite

The former Avira SmallBusiness Suite has been renamed to Avira Small Business Security Suite.

1.2 Updated product components

The new Avira Small Business Security Suite will be available with all its updated components.

The Avira Management Console as well as Avira Professional Security, Avira Server Security and Avira AntiVir Exchange will be included with their latest versions.

2. New: Avira Endpoint Security

The Avira Endpoint Security replaces the former Avira AntiVir Network Bundle and turns it from a pure sales bundle into a product with a unified setup.

The Avira Endpoint Security consists of the following components: Avira Management Console, Configuration Assistant, Avira Professional Security and Avira Server Security both for Windows and Unix. All these components are available in their latest versions.

The Configuration Assistant allows the installation of the products, setting up the security environment and managing the clients from one central point

This makes Avira Endpoint Security the ideal product for any business that wants to protect its network without being hassled by complex installation, configuration and administration procedures.

3. Added new Avira EULA (End User License Agreement) to products

The Avira Management Console, the Avira Small Business Security Suite, the Avira Update Manager and the new Avira Endpoint Security will be released with the new Avira EULA including the new contact address Avira Operations GmbH & Co. KG, Kaplaneiweg 1, 88069 Tettngang.
