Changelog

1. General Information

With the release of Version 1.3, Avira provides the opportunity for new users to create an account in *Avira My Account*.

Avira Free Android Security is available for download only via the *Google Play Store*. Existing users will get a notification directly from the *Google Play Store* to perform the update.

The release will include the languages:
- English
- German
- French
- Italian

The supported Smartphone manufacturers are:
- LG
- Samsung
- Motorola
- Sony
- HTC

Avira Free Android Security will officially support the Android version:
- 2.2   (Froyo)
- 2.3.x   (Gingerbread)
- 4.0.x   (Ice Cream Sandwich)
- 4.1.x   (Jelly Bean)
- 4.2   (Jelly Bean)

Devices with the following screen sizes are supported:
- Normal screens, low-extra high DPI[1]
- Large screens, low-extra high DPI
- Extra-large screens, low-extra high DPI

2. Bug fixes

● Updated GCM ID was constantly sent to web backend causing heavy loading

3. New features

● This version allows new users to create an account in *Avira My Account*

● Users, who have already registered to the *Avira Web Console* via a prior version of Avira Free Android Security, will have their accounts migrated to *Avira My Account*

● New users are required to enter a password upon registration

● Upon a successful registration, a user account will be created in *Avira My Account*
