Version: 12.0.0.2309

## 2. Bug fixes

- Self-test failed error in avscplr.dll
- After setup the scheduled scan does not start
- Slideup “Install Avira SearchFree Toolbar” is shown, although Web Protection and Avira SearchFree Toolbar are already installed
- Stack overflow in avreg.dll

- After deactivating the Avira SearchFree Toolbar, Web Protection is still working
- Change installation causes crash of avgnt.exe
- Scanner fails to remove RUN registry keys of repaired rootkit using rescue.avp scan profile
- Error message “Scheduler not loaded” during an update via Control Center
- There are no error messages of GUI or in logfile by incorrect configured Email parameter in Avira Server Security
- Avira Professional Security: Web Protection can not be installed or uninstalled remotely from the Avira Management Console using commands
- Added image in the Avira SearchFree Toolbar offer window, which appears during setup
- New rule definition file does not take effect immediately after download
- Avira Server Security: eicar.com is detected, even folder is excluded from scanning

### **3. Enhancements**

- After the installation, a particular website is displayed
- Enhanced “In Product Messaging” and “Notifier”
- Avira Free Antivirus: user gets notified about new functionality (e.g.: Add the Avira SearchFree Toolbar and get virus protection on the web)
