

## General Information

The Avira Version 2013 Update 13 for all Windows Workstation and Server products is addressing several categories of issues.

### Affected products

- Avira Free Antivirus
- Avira Antivirus Premium
- Avira Internet Security
- Avira Professional Security
- Avira Server Security

### Affected languages

- All supported

#### **Note**

The update requires a reboot for all versions, except Windows 8 Workstation and Avira Server Security.

## Bug fixes and improvements

### Common fixes

- Several fixes regarding the Windows 8 compatibility
- Send computer name when making calls to My Account
- The automatic renewal of the license has been improved
- Extend the User Agent String to differentiate between WFP (Windows File Protection), Windows Firewall, Avira FireWall
- Improvement in the LocalDecider and the Avira Protection Cloud integration
- Bug fixes of the Windows Filtering Platform driver in Mail and WebProtection

- The Expert Mode has been removed from the Configuration Center. By default the users will see all options, including those available until now only when Expert Mode was active
- Integration of the Avira Toolbar V6 (changed setup flow). The toolbar is offered for installation only after the product is installed
